## **DETAILED ACTION**

### ***Specification***

The incorporation of essential material in the specification by reference to a foreign application or patent, or to a publication is improper. The Specification appears to incorporate by reference JIS P-1824 which is essential because it is set forth in the claimed invention and purports to contain a definition of claim limitations. Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or a practitioner representing the applicant, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. See *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); and *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973).

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-3 reference JIS P-8124 which render the claims indefinite as industrial standards are subject to change.

### ***Claim Rejections - 35 USC § 103***

Art Unit: 1616

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0 393 723 in view of JP 11-137336.

EP 0 393 723 teaches a paper containing hydroxyapatite and talc, where the paper preferably has a basis weight of 20 g/m<sup>2</sup>, which is used as deodorants and absorbants (pgs. 5-10).

JP 11-137336 teaches a paper used to absorb oil from the skin containing talc.

The difference between the prior art and the claimed invention is that the prior art does not expressly disclose a sebum absorbing paper used for applying to skin or for cleaning skin which contains 1-30% by weight hydroxyapatite and has a basis weight of 5 to 25 g/m<sup>2</sup> as defined in JIS P-8124. However, the prior art amply suggests the same as it is known in the art to use papers containing hydroxyapatite and talc as absorbants and papers containing talc are known to be used for absorbing oil from the skin. As such, one of ordinary skill in the art would have been motivated to modify the prior art as above with the expectation that a paper containing hydroxyapatite and talc would be suitable for absorbing sebum from the skin.

Therefore, the claimed invention, as a whole, would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been collectively taught by the combined teachings of the references.
